Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9974-1 was prepared jointly by Technical Committees ISO/TC 5, *Ferrous metal pipes and metallic fittings*, Subcommittee SC 5, *Threaded or plain end butt-welding fittings, threads, gauging of threads*, and ISO/TC 131, *Fluid power systems*, Subcommittee SC 4, *Connectors and similar products and components*.

ISO 9974 consists of the following parts, under the general title *Connections for general use and fluid power — Ports and stud ends with ISO 261 threads with elastomeric or metal-to-metal sealing*.

— *Part 1: Threaded ports*

— *Part 2: Stud ends with elastomeric sealing (type E)*

— *Part 3: Stud ends with metal-to-metal sealing (type B)*

The performance requirements, dimensions and designs are defined for port and stud end connections for the L and S series in ISO 9974-2 and for the LL, L and S series in ISO 9974-3. Significant testing over more than 30 years of use has confirmed the performance requirements of these port and stud end connections.

Stud ends conforming to ISO 9974-2 and 9974-3 are identical to those conforming to DIN 3852-1. ISO 9974-2 stud ends are used on ISO 8434-1 and ISO 8434-4 fittings, and ISO 9974-3 stud ends are used on ISO 8434-1 fittings.

Annex A of this part of ISO 9974 is for information only.

Introduction

In fluid power systems, power is transmitted and controlled through a fluid (liquid or gas) under pressure within an enclosed circuit. In general applications, a fluid may be conveyed under pressure.

Components are connected through their threaded ports by fluid conductor fittings to tubes and pipes or to hose fittings and hoses.

Ports are an integral part of fluid power components, such as pumps, motors, valves, cylinders, etc.

Connections for general use and fluid power — Ports and stud ends with ISO 261 threads with elastomeric or metal-to-metal sealing —

Part 1:
Threaded ports

1 Scope

This part of ISO 9974 specifies dimensions for ports with ISO 261 threads and elastomeric (type E) or metal-to-metal (type B) sealing for general use and in fluid power applications with the stud ends detailed in ISO 9974-2 and ISO 9974-3. It also specifies test methods and the designation of these ports.

Ports in accordance with this part of ISO 9974 may be used at working pressures up to 63 MPa (630 bar [1]). The permissible working pressure depends upon the port size, materials, design, working conditions, application, etc.

For threaded ports and stud ends specified in new designs in hydraulic fluid power applications, only ISO 6149 is to be used. Threaded ports and stud ends in accordance with ISO 1179, ISO 9974 and ISO 11926 are not to be used for new designs in hydraulic fluid power applications.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 9974. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this part of ISO 9974 are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

3 Definitions

For the purposes of this part of ISO 9974, the definitions given in ISO 5598 apply.

4 Dimensions

Ports shall conform to the dimensions shown in figure 1 and given in table 1.

1) 1 bar = 0,1 MPa = 10^5 Pa; 1 MPa = 1 N/mm^2

2) To be published. (Revision of ISO 261:1973)

Table 1 — Port dimensions

Dimensions in millimetres

Thread [1] ($d_1 \times P$)	d_2 ref.	d_3 nom.	d_3 tol.	d_4 min.	L_1 max.	L_2 min.	L_3 [2] min.	W
M8 × 1	3	8		13	1	8	10	
M10 × 1	4,5	10		15	1	8	10	
M12 × 1,5	6	12		18	1,5	12	15	
M14 × 1,5	7	14		20	1,5	12	15	0,1
M16 × 1,5	9	16		23	1,5	12	15	
M18 × 1,5	11	18	$^{+0,2}_{0}$	25	2	12	15	
M20 × 1,5 [3]	10	20		27	2	14	17	
M22 × 1,5	14	22		28	2,5	14	17	
M26 × 1,5	18	26		33	2,5	16	19	
M27 × 2 [4]	16	27		33	2,5	16	20	
M33 × 2	23	33		41	2,5	18	22	0,2
M42 × 2	30	42	$^{+0,3}_{0}$	51	2,5	20	24	
M48 × 2	36	48		56	2,5	22	36	

1) Conforming to ISO 261.

2) The tap drill depths given require the use of a bottoming tap to produce the specified full thread lengths. Where standard taps are used, the tap drill depths shall be increased accordingly.

3) For measurement applications.

4) M27 × 2 is used only in S (heavy-duty) series.

5 Test methods

Ports shall be tested together with stud ends in accordance with the test methods and requirements given in ISO 9974-2 and ISO 9974-3.

6 Designation of ports

The ports shall be designated by

a) "Port";

b) reference to this part of ISO 9974, i.e. ISO 9974-1;

c) thread size ($d_1 \times P$).

EXAMPLE

Port ISO 9974-1 - M10 × 1

7 Identification statement (Reference to this part of ISO 9974)

Use the following statement in test reports, catalogues and sales literature when electing to comply with this part of ISO 9974:

"Threaded ports conform to ISO 9974-1:1996, *Connections for general use and fluid power — Ports and stud ends with ISO 261 threads with elastomeric or metal-to-metal sealing — Part 1: Threaded ports.*"
